

CASE STUDY

INTEGRATED NEWS MANAGEMENT AND MULTI-CHANNEL DISTRIBUTION FOR **POLISH PRESS AGENCY**

End to end multimedia
DAM and distribution
system

The insights behind the project

Polish Press Agency (PAP) is the single largest source of news from Poland with over 250 reporters and 40 photojournalists delivering accurate and comprehensive news to leading media outlets, government and financial institutions, investors and entrepreneurs in and outside of Poland.

A thorough analysis showed that the PAP needed support for significantly high usage volumes in terms of users and of handled content. Moreover, they were looking for a single, easy to use, platform for handling all types of multimedia to secure operational improvement, along with reliable remote access capabilities for regional corresponders.

SUCCESS HIGHLIGHTS

Challenge

- Facing a serious gap of important functionalities in the text production system
- Replace a non-flexible reception system for news wires reception in various formats

Solution

Newsasset Agency edition

Benefits for Polish Press Agency

- Unified, robust platform to create, manage and distribute news content via multiple channels
- Categorization and classification based on IPTC standards
- Implement a system with reasonable TCO

What we did for the client

In 2008, the Polish Press Agency (PAP) selected **newsasset platform** (Agency edition), and replaced the old editorial system (KWAZAR) with a common Content Hub that converges editorial production for Print, Digital, Radio, TV and News Agencies and fully supports the production, management and distribution of news.

A specialized **Events module** played a vital role for PAP users to handle all news stories planning process. Via this module, the users have the ability to **assign** Events to Departments and People, accompanied with the capability to monitor news production according to deadlines set. In addition, users had the chance to exploit sophisticated technology for **searching, retrieving, filtering, shorting, previewing and monitoring** digital and news assets across the platform.

Several APIs used to allow integration with other existing systems and a web access subsystem was implemented, providing full editorial and news coverage functionality even remotely

The outcome

PAP teams now enjoy a **complete and secure system** for management, delivery and storage, of sensitive information, handling large volumes of data in various forms, while also exploiting events handling and news planning process. Moreover, **newsasset platform** allows PAP teams to meet the demands of both traditional customers and electronic media, since it supports powerful content reception and automated distribution to multiple channels.

Last but not least, the PAP acquired a system with reasonable TCO; an agile, open architecture platform, fully expandable to meet any additional future requirement, that ensures a quick return on the investment and its long lasting duration.

As Mr Ryszard Niżewski, Head of the Operational Committee of said, "we [i.e. PAP] were very satisfied with the customer- oriented attitude in our everyday cooperation. The newsasset editorial IT system allows PAP's journalists, editors and sales staff not only to make full use of IPTC metadata, but also to develop our internal workflow with all of its traditions, habits and new ideas. Our partners are always ready and eager to help us in creating new functionalities and new possibilities. When we look for new solutions, we can be sure that they will understand our needs perfectly."

About us

Newsasset LTD provides fully modular solutions easily configured to meet the varying needs on news, content & information management of different departments and job functions of any industry.

Newsasset platform is an intuitive and secure cloud based environment for storing, managing, creating and publishing news, a common Content Hub to converge editorial production for Print, Digital, Radio, TV and News Agencies. In order to address the fake news phenomenon, newsasset platform is fully integrated with **Truly Media solution**, a collaborative tool co-developed with Deutsche Welle (DW) that helps users evaluate the validity of user generated content in their effort to tackle the fake news phenomenon.
